

1. What are the three main layers of software architecture? Write one line about each.

Layer	Description
Presentation Layer	Handles the user interface and displays information to users.
Business Logic Layer	Processes data and implements the application's rules and logic.
Data Layer	Stores, retrieves, and manages data from databases.

2. Define client and server in your own words with one real-life example.

- **Client:** A device or application that requests services or information from another computer.
- **Server:** A computer or system that provides services or information to clients.

Example: When you open YouTube on your phone, your phone acts as the **client** and YouTube's computers act as the **server** that sends videos to your device.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

Feature	Desktop Apps	Web Apps	Mobile Apps
Installation	Must be installed on a computer.	Run in a web browser; no installation needed.	Installed from an app store.
Device Support	Mainly for PCs and laptops.	Works on any device with a browser.	Designed for smartphones and tablets.

4. Name any 3 databases and mention whether each is SQL or NoSQL.

Database	Type
MySQL	SQL
PostgreSQL	SQL

Database**Type**

MongoDB

NoSQL
