

1. What is a Program? (Short Paragraph)

A **program** is a set of instructions written in a programming language that tells a computer or device what tasks to perform. Programs help users complete different activities such as messaging, shopping, gaming, and online payments. For example, when using the mobile app Instagram, a program allows users to view posts, upload photos, and send messages.

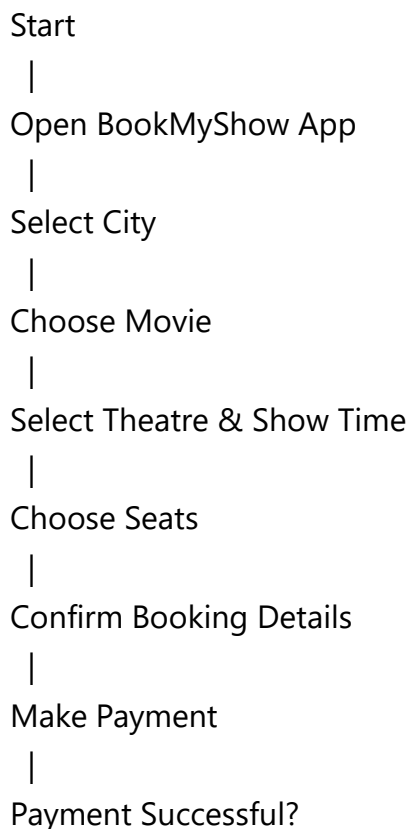

2. Three Popular Programming Languages and Their Type

Programming Language Type

Python	Interpreted
Java	Both (Compiled and Interpreted)
JavaScript	Interpreted

3. Flowchart for Booking a Movie Ticket on BookMyShow
