

Assignment: Debugging, Formatting, and Code Quality in JavaScript

1. Fix the Buggy Zomato Order Code

Issues Found

1. `i` was not declared using `let`.
2. `total =+ prices[i]` is incorrect. It assigns a positive value instead of adding to the total.
3. The correct operator should be `+=`.

Corrected Code

```
let items = ["Burger", "Pizza", "Fries"];
let prices = [120, 250, 90];

let total = 0;

// Loop through all prices and add them to total
for (let i = 0; i < items.length; i++) {
    total += prices[i];
}

console.log("Total price is: " + total);
```

Output

Total price is: 460

2. Improve Indentation and Add Comments

Original Code

```
function isEven(num){if(num%2==0){return true;}else{return false;}}
```

Improved Code

```
// Function to check whether a number is even
```

```
function isEven(num) {  
  
    // If the remainder is 0, the number is even  
    if (num % 2 == 0) {  
        return true;  
    }  
  
    // Otherwise, the number is odd  
    else {  
        return false;  
    }  
}
```

Example Usage

```
console.log(isEven(8));
```

Output:

true

3. Function: formatFollowersCount(count)

// Convert follower count into Instagram-style format

```
function formatFollowersCount(count) {  
  
    // For millions  
    if (count >= 1000000) {  
        return (count / 1000000).toFixed(1) + "M";  
    }  
}
```

```
// For thousands
else if (count >= 1000) {
    return (count / 1000).toFixed(1) + "K";
}

// For numbers below 1000
else {
    return count.toString();
}
}

// Test Examples
console.log(formatFollowersCount(1500));
console.log(formatFollowersCount(1200000));
console.log(formatFollowersCount(850));
```

Output

1.5K

1.2M

850

4. Fix the Even Number Program

Error Found

The condition uses:

$i \% 2 = 0$

= is an assignment operator.

It should be:

```
i % 2 == 0
```

or

```
i % 2 === 0
```

Corrected Code

```
// Print all even numbers from 1 to 10
```

```
for (let i = 1; i <= 10; i++) {
```

```
    // Check if the number is divisible by 2
```

```
    if (i % 2 === 0) {
```

```
        console.log(i);
```

```
    }
```

```
}
```

Output

2

4

6

8

10

Conclusion

This assignment demonstrated:

- Finding and fixing syntax and logic errors.
- Proper indentation and code formatting.
- Writing meaningful comments.
- Creating reusable functions.
- Using conditional statements and loops effectively.

- Improving code readability and maintainability.
